FACTS AND FIGURES REGARDING MANUFACTURING IN BUFFALO

YOU'VE been told all your life that Buffalo is a beautiful city—a good place in which to live.

But did anybody ever tell you that Buffalo is the best manufacturing city in this country?

Well, it is, and it is our purpose to prove it to you.

When all vital points of manufacturing are considered you will see that Buffalo as a manufacturing center is growing more rapidly than any other in the whole United States.

Buffalo is within five hundred miles of one-half the entire population of the United States and three-fourths of the population of Canada.

Buffalo manufactures a wide diversity of products, so that practically anything you could need for your business or your home can be obtained from a manufacturer in your own city.

Would you like to know perhaps more than you know now about Buffalo as a manufacturing city? You'll find that the United States government, through its Bureau of the Census, has a lot of information that ought to please you. Uncle Sam has collected figures which will prove to you, if you haven't known it before, that Buffalo not only means business, but has business, and is getting more business faster than any other city in the country.

Buffalo's manufacturing is unusually diversified.

Buffalo's manufacturing is growing with unequalled rapidity.

The best source of information regarding the progress of the manufacturing in the United States from 1900 to 1905 is the bulletin issued by the Federal Bureau of the Census.

Important facts contained in the exhaustive reports of the census bureau are set forth in these pages with the view of driving home to the minds of the manufacturers of Buffalo the great progress shown in 1905 over 1900 by the manufacturing industries of this city, and to emphasize, as well, that other point that Buffalo produces a vast number of products.

Buffalo's manufacturing importance is increasing by leaps. Buffalo men know that there is good reason for the growth. Vast supplies of raw materials are easily accessible and the city has unrivaled shipping facilities by land and water lines. Fuel is cheap and the

supply never failing. The wonderful falls of Niagara, marvel of the world, serve Buffalo with power. The location of the city is a level plot of ground. Inexhaustible Lake Erie provides a water supply which is subject to no interruptions.

These are some of the local reasons for Buffalo's increase in importance as a manufacturing center, but there is another great reason. That is the situation of Buffalo with reference to the location of the bulk of the population on the North American continent.

Draw a circle with Buffalo as a center and a radius of five hundred miles. The circumference of the circle will lie north of Toronto, Ottawa, Montreal and Quebec; east of Augusta, Me., Boston, New York City and Philadelphia; south of Washington, Norfolk, Richmond and Cincinnati, and west of Chicago, Milwaukee and Sault Ste. Marie. All of New England except a small part of Maine, all of Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Ohio and Michigan with parts of North Carolina, Kentucky, Indiana and Wisconsin, besides all of the populous parts of Ontario and Quebec provinces are within five hundred miles of the Buffalo manufacturer.

One-half the population of the United States and three-quarters of the population of Canada are only a night's ride from the shipping room of every manufacturer in Buffalo; and the cars of eighteen trunk line railroads, the ships of many lake steamship companies, besides the barges of the Erie Canal are available for the shipping of the products made in Buffalo.

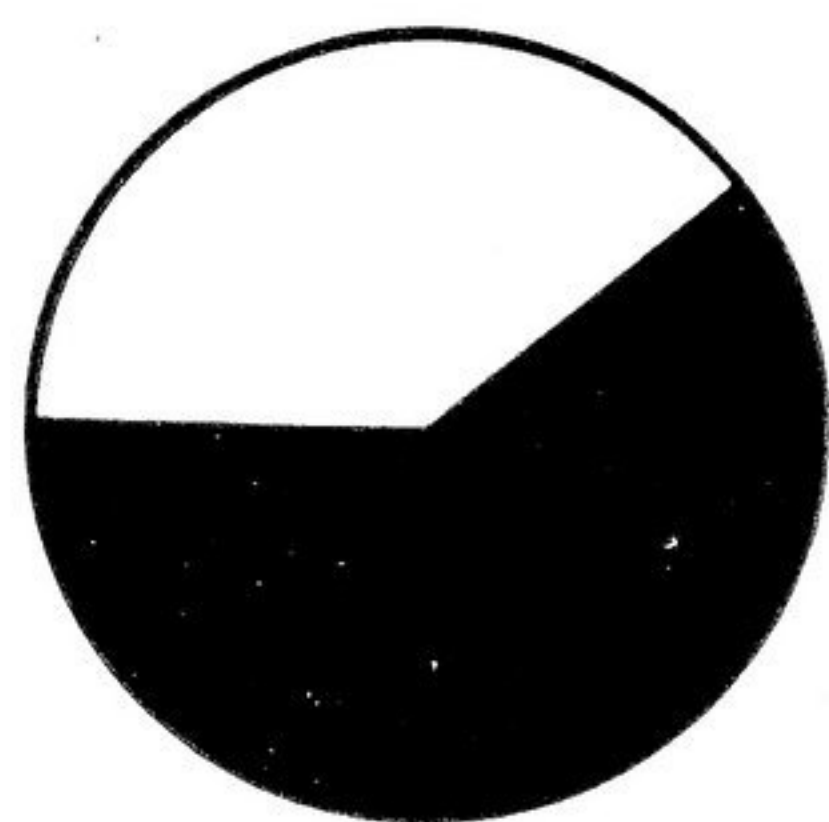

During the 1900-1905 period the number of manufacturing establishments in Buffalo increased 4.4 per cent. Capital invested in manufacturing establishments increased 79.3 per cent. The amount expended in 1905 for materials was 44.4 per cent. greater than in 1900. The number of wage earners increased in the period 29.9 per cent. The amount of wages paid in 1905 was 43.5 per cent, greater than in 1900. The value of products manufactured in Buffalo was 48.2 per cent. greater in 1905 than in 1900.

While Buffalo produces a large number of manufactured products, it is true also that no one industry has gained such ascendancy in the manufacturing development of the city that misfortune to that one industry could work disaster to the city as a whole.

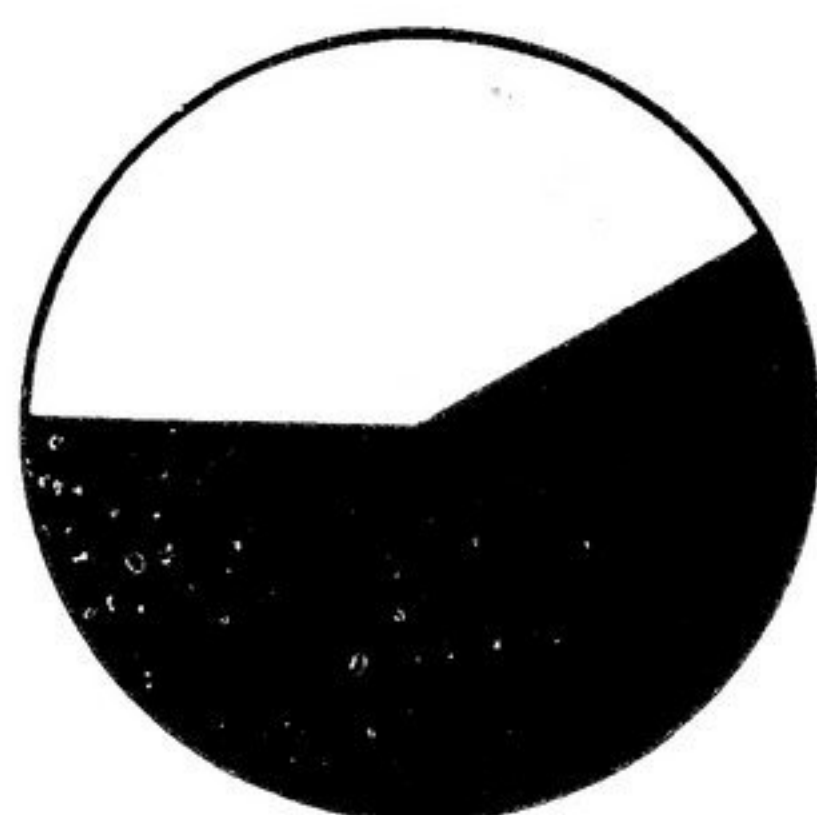

In Pittsburg 60.9 per cent. of the manufacturing is iron and steel; in Cincinnati 58.7 per cent. is liquors; in Chicago 28 per cent. of the total is slaughtering and meat-packing; in Cleveland 25.1 per cent. is

iron and steel; in Philadelphia 18.9 per cent is textiles, while of Boston's total 14.8 per cent. is boots and shoes.

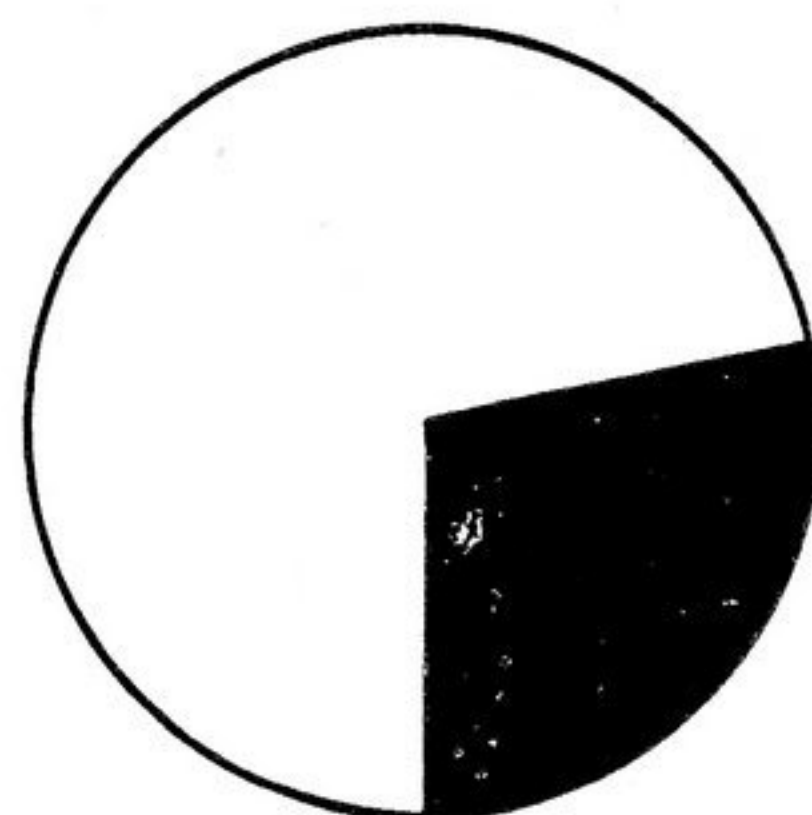

In Buffalo the biggest manufacturing industry, iron and steel, represents only 10.8 per cent. of the total product.

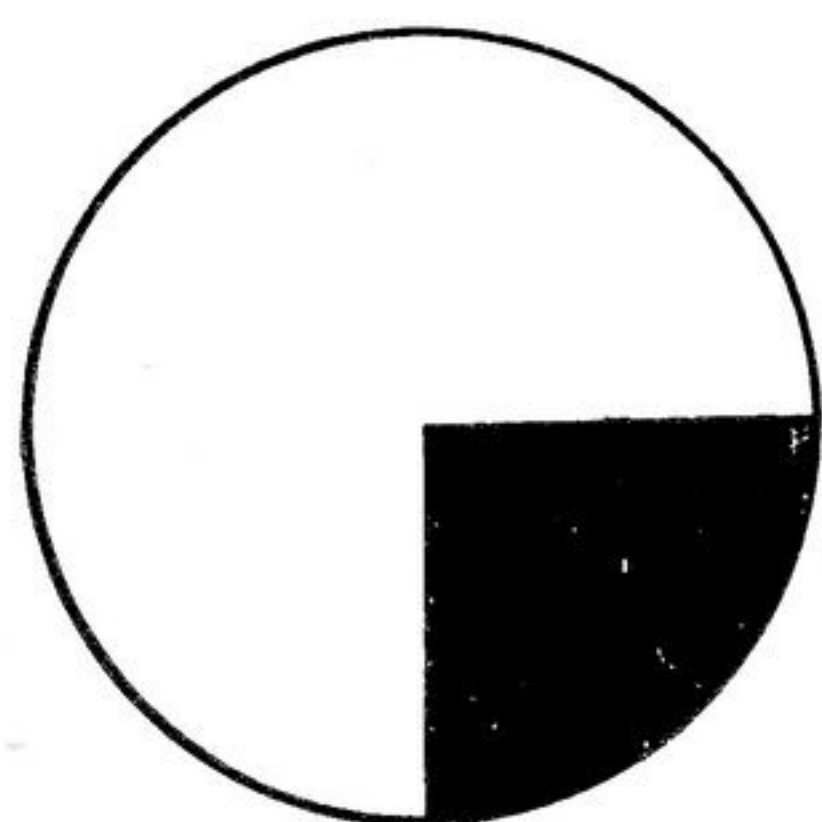

Pittsburg
Iron and Steel

18.9%

Boston
Boots and Shoes
14.8%

BUFFALO

Iron and Steel
10.8%

In other words, Buffalo is vulnerable to attack by reason of reverses to any single line of manufacturing to a much less degree than any other of the cities named.

The leading manufactures of the city are iron and steel, slaughtering and meat-packing, foundry and machine shop products, flour and grist mill products, linseed oil, copper, malting and refining liquors, malt.

The Bureau of the Census recognizes 339 lines of manufacturing as existing in the United States.

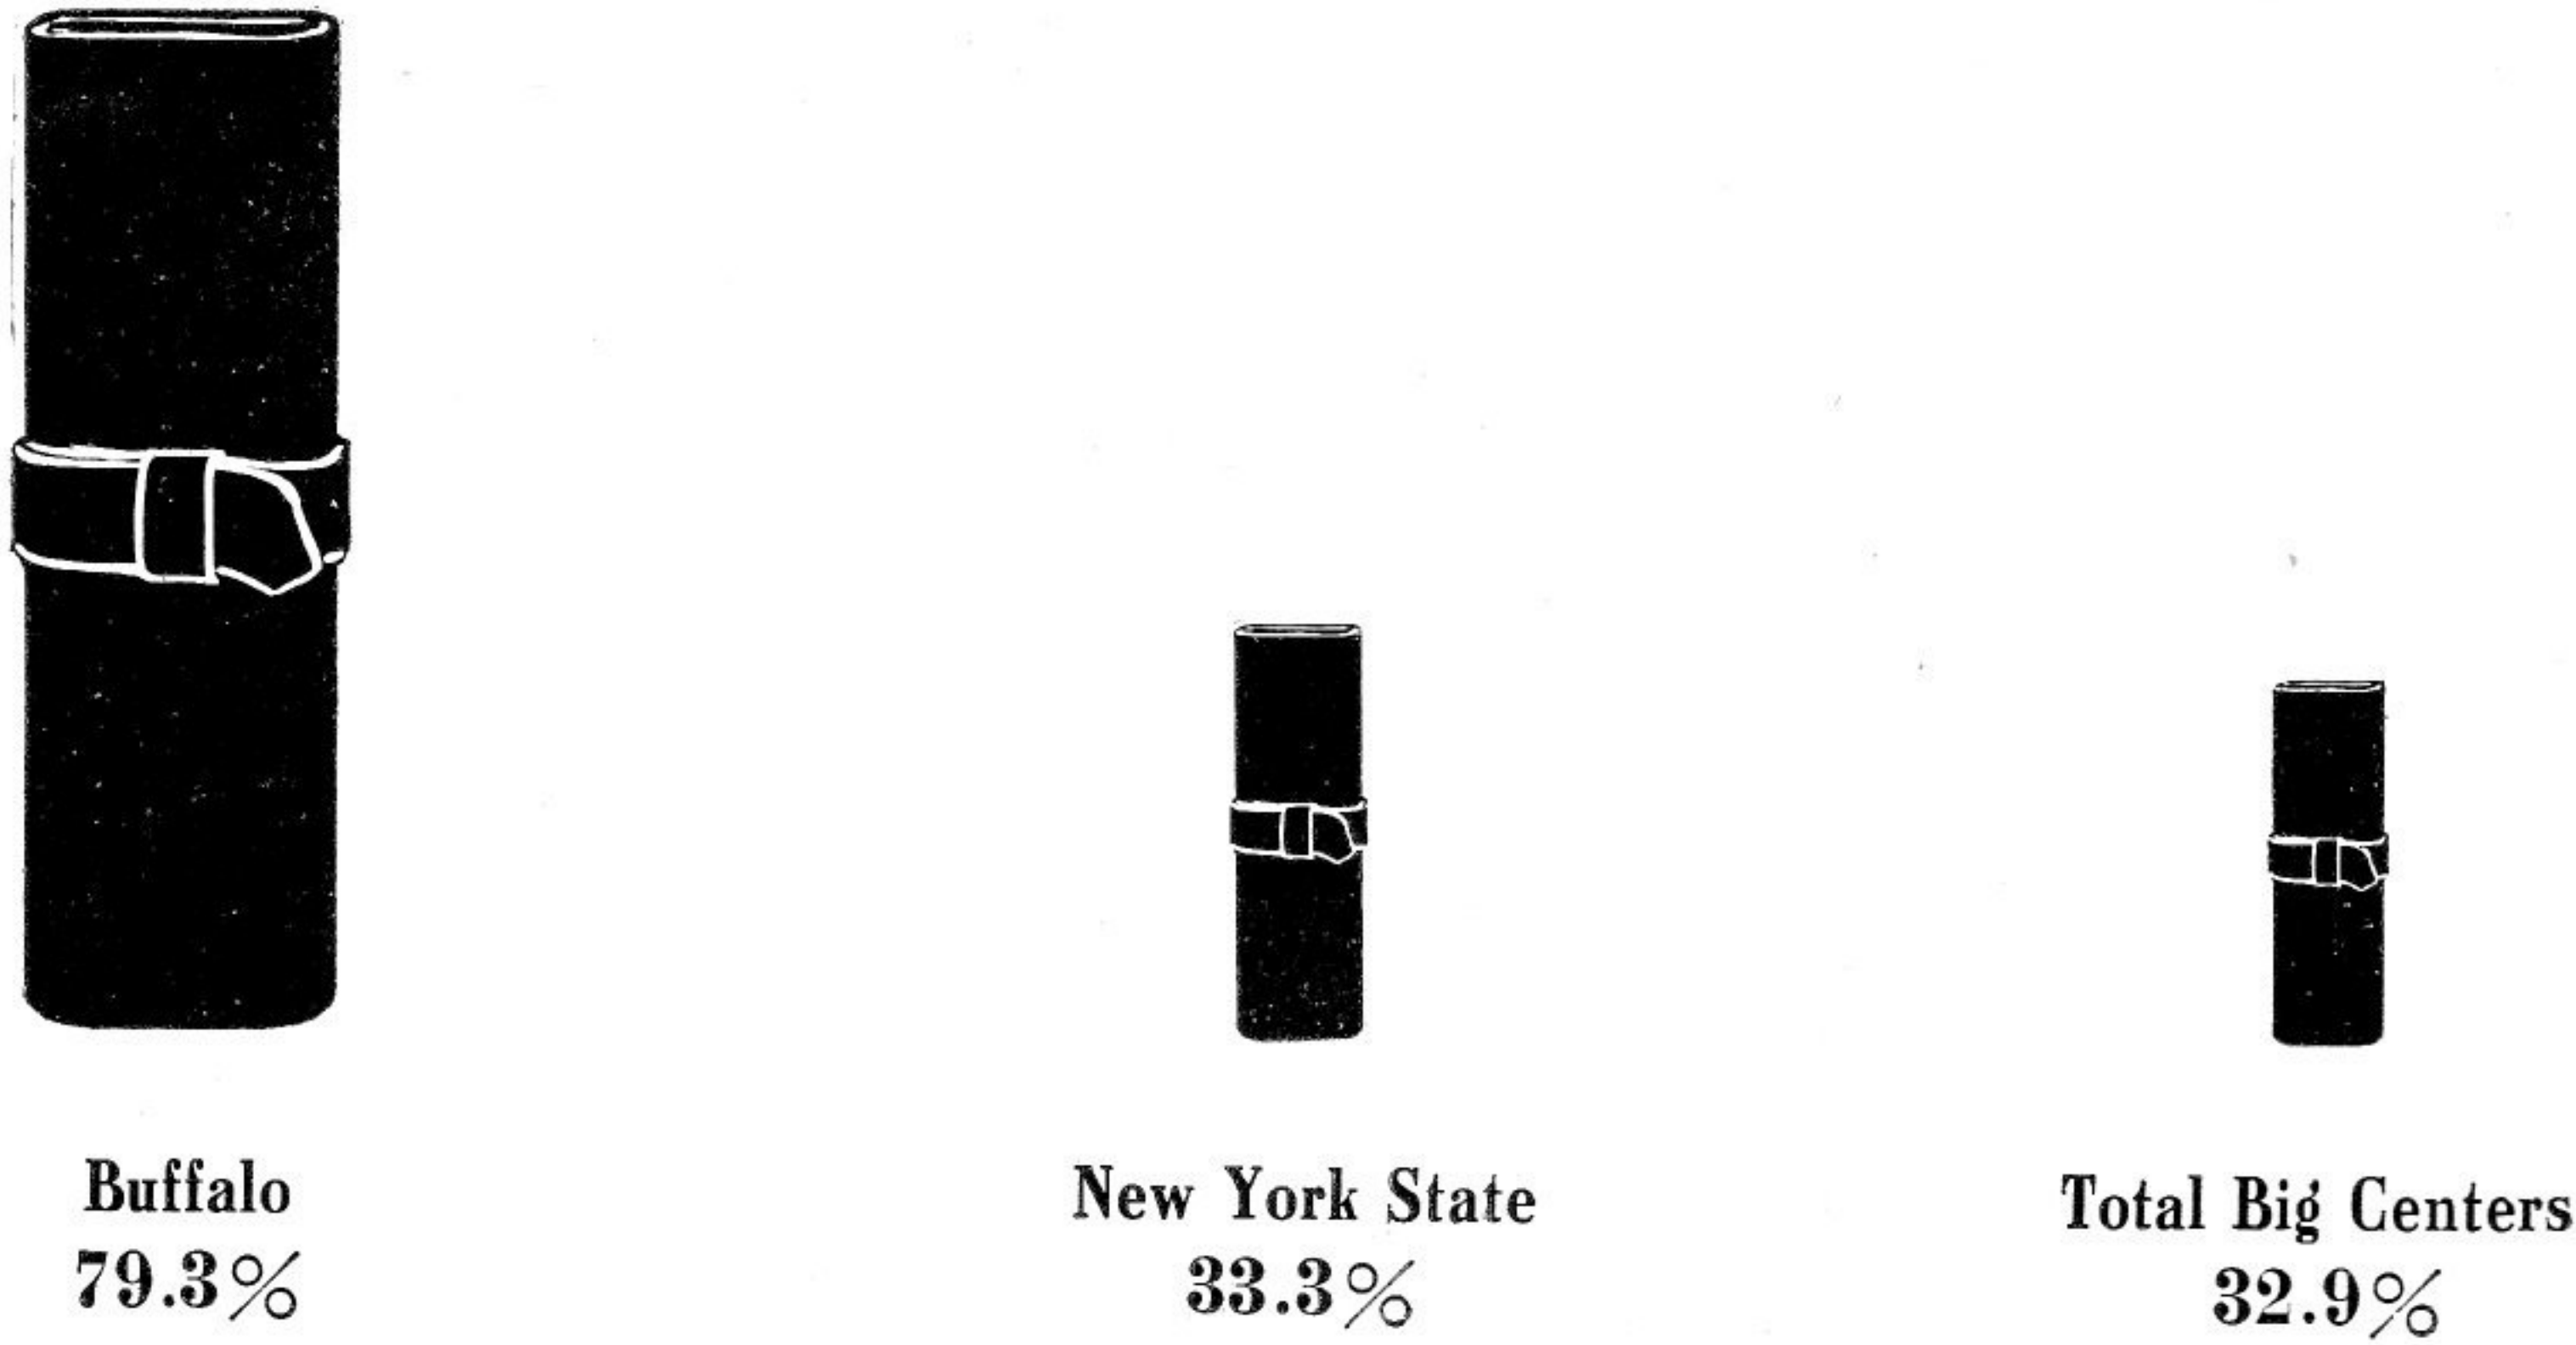

Of this total there are to be found in New York state, the premier manufacturing state of the Union, 316 different lines or 93.2 per cent. of the total for the country.

Buffalo is represented in the census report by 198 sorts of manufacturing enterprise. In other words, of all the various manufactured products of the United States Buffalo contributes in 58.4% of the lines.

Here is a comparison of increase from 1900 to 1905 in capital invested in manufacturing, number of wage earners employed by manufacturers, amount of wages paid by manufacturers, value of materials bought by manufacturers and value of products of manufacturers, in Buffalo, in New York State and in the chief manufacturing centers of the United States.

INCREASE OF CAPITAL INVESTED IN MANUFACTURING 1900-1905
